Credit Name:CSE3110
Assignment Name:Reverselist

Describe the errors you've encountered while working on this assignment. What caused the error and how do you overcome the error?

```java
System.out.println("Please enter up to 10 numbers (or enter 999 to terminate): ");

int count = 0;
while (count < 10) {
    int num = scanner.nextInt(); // Read the input number from the user

    if (num == 999) {
        break; // Exit the loop if the user enters 999
    }

    stack.push(num); // Push the number onto the stack
    count+;
}

System.out.println("The reversed list of numbers is: ");

while (!stack.isEmpty()) {
    System.out.println(stack.pop()); // Pop and print each number from the stack
}
```

My error was that I forgot to add another + to the count statement.

```java
    }
    System.out.println("The reversed list of numbers is: ");

    while (!stack.makeEmpty()) {
        System.out.println(stack.pop()); // Pop and print each number from the stack
    }

}
```

Had to change the .makeEmpty to .isEmpty

```java
    System.out.println("The reversed list of numbers is: ");

    while (!stack.isEmpty()) {
        System.out.println(stack.pop()); // Pop and print each number from the stack
    }
```

After that my code worked
